Research Interest

My research centers on training intelligent robotic agents that align closely with human intentions. To achieve this, I leverage Reinforcement Learning (RL) to develop robotic agents capable of learning human-aligned behaviors in various tasks. A key focus of my work has been designing reward learning algorithms that accurately capture human intent, either through direct human feedback or by grounding in vision-language foundation models. More recently, I have emphasized advancing RL methods themselves to better support the training of such human-aligned robotic agents.

Work Experience

Visiting PhD Student @ University of Texas at Austin

Austin, USA

WITH YUKE ZHU

Sep. 2024 - Jun. 2025

- Developing an action-sequence reinforcement learning framework suited for training with modern action prediction architectures. [P2]
- Designed VLM-based reward framework encouraging human-aligned behaviors without human reward engineering.

External Collaborator

WITH JOSEPH J. LIM (KAIST)

Mar. 2024 - June. 2024

- Developed a visual reward learning algorithm [C4] for solving complex long-horizon robotic manipulations.

External Collaborator

WITH LISA LEE (GOOGLE DEEPMIND)

Apr. 2023 - Aug. 2023

- Developed an imitation learning algorithm [C3] using multimodal representations for improving generalization ability in unseen variations.

External Collaborator

WITH HONGLAK LEE (UNIVERSITY OF MICHIGAN)

Mar. 2022 - June. 2024

- Developed an imitation learning algorithm [C3] using multimodal representations for improving generalization ability in unseen variations.
- Developed a reinforcement learning algorithm [W1] for improving generalization ability in varying dynamics.
- Developed a preference-based reinforcement learning algorithm [C2] for modeling non-Markovian human preferences.
- Developed a visual reward learning algorithm [C4] for solving complex long-horizon robotic manipulations.

Machine Learning Engineer

Seongnam, S.Korea

KAKAO, RECOMMENDATION TEAM

Dec. 2020 - Feb. 2022

- Developed ML platform for recommendation system.
- Implemented data pipeline from user feedback to refined user-item interaction matrix data.
